DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Gregory W. Harper on 6/22/2006.

The application has been amended as follows:

- Cancel claims 8-15

Allowable Subject Matter

1. Claims 1,3-7 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Applicant teaches a cooling jacket to be mounted on an outer surface of an electric motor for cooling the electric motor, comprising: a cooling pipe for flowing coolant; a plate member having one surface supporting said cooling pipe and another surface uniformly conforming to the outer surface of the electric motor; fastening means for fastening said plate member on the electric motor such that the other surface of the plate member abuts on the outer surface of the electric motor a wherein said plate member is divided into a plurality of plate segments, and said fastening means comprises connecting members for connecting adjacent ones of the plate segments and having adjustors for adjusting gaps between the adjacent ones of the plate segments.

Wilkinson (U.S. Pat. 2,338,154) discloses a cooling jacket on the outer surface of a motor. However, the cited reference fail to individually disclose, or suggest when combined, a cooling pipe having fastening means for fastening said plate member on the electric motor such that the other surface of the plate member abuts on the outer surface of the electric motor, wherein said plate member is divided into a plurality of plate segments, and said fastening means comprises connecting members for connecting adjacent ones of the plate segments and having adjustors for adjusting gaps between the adjacent ones of the plate segments.

No prior art was found teaching individually, or suggesting in combination, all of the features of the applicants' invention, specifically a cooling pipe having fastening means for fastening said plate member on the electric motor such that the other surface of the plate member abuts on the outer surface of the electric motor, wherein said plate member is divided into a plurality of plate segments, and said fastening means comprises connecting members for connecting adjacent ones of the plate segments and having adjustors for adjusting gaps between the adjacent ones of the plate segments in combination with the recited structural limitations of the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
